

Can Low carb Diets Cause Gout

Even though it's unclear on how someone can decrease their risk of pseudogout, so far as **gout** is concerned, the best way to reduce the risk is to control your diet as well as your weight. If you are overweight, it is imperative that you know there is a ideal approach to utilise when it comes to shedding pounds for **gout prevention**.

- There is no question that obesity is a major risk factor for gout.
- Studies on overweight men have shown that the more weight they gain, the higher their risk of developing the condition.

How can obesity give rise to gout risk? Think about it, those who are obese, or considerably overweight, usually lead a sedentary lifestyle, have a diet rich in fatty foods, alcohol and caffeinated beverages that are dehydrating.

- Studies have concluded that men, who are overweight, are twice as likely to develop gout, while obese men are three times as likely.
- It was also discovered that when the over weight men lost simply 10 pounds, they will decreased their risk of gout by 40 percent!

Now that you know the role weight plays in gout risk, it's time to take a look at the right way of losing weight to prevent gout, and also the wrong way.
