

Gout Medication - the Good, the bad and the Side Effects

The severity of a patients **gout** and family history with gout will weigh greatly on the method used for treating the symptoms and avoiding future bouts with the painful condition. Among the remedies that are offered are usually gout treatment, lifestyle changes, diet plan adjustments and surgery.

- Gout causes extreme pain that can last a few days and practically leave someone crippled in the course of an attack.
- Steroids are often prescribed in order to immediately relieve the pain.
- Steroids will alleviate this because they have the ability to reduce the inflammation and the swelling fairly quickly.

Although steroids do not have the best reputation, they can still be very good for many medical conditions. Generally when a doctor decides to prescribe a steroid to deal with your own gout he or she will more than likely give you tiny doses over a very short period of time.

Cases of gout that are less severe a physician might feel the need to only suggest an anti-inflammatory medication. This will act the same as a steroid as far as bringing the inflammation down to relieve the pain. It may be possible your doctor will prescribe you pills to take when you feel an attack coming on or you might be able to have an injection directly into the joint.

Here is a Summary of the Typical Medications Doctors Prescribe for Gout:

NSAIDs (nonsteroid anti-inflammatory drugs)

Naproxen

Indomethacin.

Best 3 Tips to lower Uric Acid Naturally When trying to lower uric acid levels naturally, it is vital that you do things correctly. Otherwise, you could end up with higher acid levels and make the gout even worse. Allow me to share three simple ways to help prevent this kind of happening...

Ibuprofen

Colchicine is another medication that is used sometimes for treating severe **gout attacks**.

- Corticosteroids can be either injected into the muscle or the joint itself, or it can be given in a pill form.
- This is usually given after other medications that have not worked on a patient.
- Before you try to use over the counter medications to treat your gout you should consult with your doctor.
- Some over the counter medications can make the gout even worse, such as aspirin.
- Your doctor will give you a list of overthecounter medications you can take that will not interfere with any existing medications or the gout.

In addition to a gout medication you should make sure you are not eating foods that are high in **purines**. Controlling and taking care of gout calls for more than taking a prescription, you should alter your diet in order to exclude foods that are high in purines. Exercise regularly and avoiding alcohol are more ways you can minimize your gout attacks and successfully manage your gout.
