

Prevention of Gout

Prevention of **gout** mainly lies in controlling level of **uric acid** in the body. This can be done in two ways one being a diet check and another by medication .people along with gout should eat a lot more natural fruit, vegetables, grains, seed and nut products. Cherries and strawberries tend to be recommended .food rich in purine like offal (e.g. kidney, tripe and vinegar based foods and also excessive amounts of animal protein also needs to be avoided .in turn one should eat a low -fat diet.

People With Gout Have a Higher Risk for Heart Disease

But with necessary diet plan would not only reduced risk for gout but also risk for heart disease. If you have obesity they ought to slowly lose weight given that this can lower **uric acid levels**. However one should realize that losing weight too swiftly can occasionally precipitate **gout attacks**?It is characterized by unexpected, unbearable, unexpected severe pain in addition to swelling, redness, warmth and tightness in the affected joint. It is common in men but women are not excluded either since it affect them right after menopause when it is seen quite often.

“ Another major prevention factor is reducing intake in the form of beer and wines are related to gout flare-ups one should limit alcohol drinks to one or two measure a day. drinking a lot of water helps prevent further attack .intake of dairy products, such as non-fat milk and yogurt can also lower the frequency of gout attacks.
